

SEBO DART UHS

MADE IN GERMANY

SEBO DART UHS*

BRILLIANT PERFORMANCE ON HARD FLOORS

*The UHS polisher can only be used with a DART vacuum cleaner as shown.

SEBO DART UHS ULTRA HIGH SPEED POLISHER

Professional results, effortlessly

It has never been easier to make hard floors shine.

A SEBO DART with UHS polisher is the perfect choice to maintain hard floors, making them easy to clean, longer lasting and giving them a super gloss finish.

The SEBO DART with UHS vacuums and polishes:

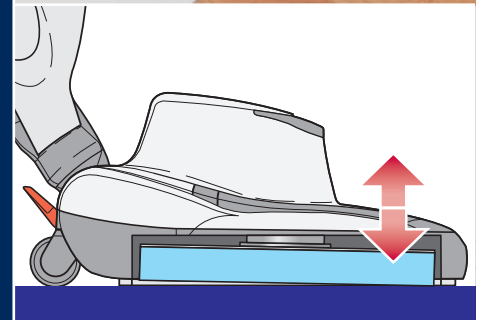

The suction unit removes fine particles, leaving the floor dust free, whilst the highly efficient 2000U/min Ultra High Speed (UHS) floor polisher creates a brilliant gloss surface. The result is a spotlessly clean floor which leaves even small areas looking clean and bright - ideal for medical practices, hotels, shops, nursing homes, etc.

Of course appearances aren't everything. Using the UHS floor polisher will also create a protective coating for the floor, when used with an appropriate floor maintenance product. The ultra high speed action causes the ingredients in a floor maintainer to bond together to form a new surface. Using the UHS polisher at regular intervals will maintain this protective layer, sealing any scratches and microscopic cracks in the floor which could otherwise hold dirt and moisture. The floor will not only be clean and hygienic, used regularly it can also prolong the life of the floor.

This is professional floor care – easy, efficient and effective.

Automatic height adjustment

The SEBO UHS adjusts the floor pad automatically to the floor surface. The patented torque sensor constantly monitors the floor pad and raises or lowers it to achieve optimum performance. It also protects the floor; it will instantly lift the pad if the resistance is too high, for example if the pad has been pushed onto a carpet. This makes the SEBO UHS both safe and easy to use as the machine will not try to twist out of your grip. In addition, to ensure even the finest dust is removed, a suction sealing strip is fitted to the base of the UHS.

Flex neck

Unlike other polishers which have to be forced to change direction, the SEBO UHS will move about with ease. The flexible swivel neck enables the machine to be steered around obstacles with minimal effort.

Easy to clean

The clear suction duct cover makes it easy to identify blockages. A quick release button makes access fast and simple.

Automatic shut off

The SEBO UHS is an intelligent machine. The green LED light indicates that the UHS is operational and everything is ok. The red LED light comes on if the machine has shut down for safety reasons, such as a blockage.

All round protection

The SEBO UHS has a lower and upper bumper to help protect both walls and furniture from being marked or damaged.

3 Castor design

3 high quality castors, soft coated to protect the floor and supported by stainless steel shafts, ensure the SEBO UHS runs smoothly over the floor. The two rear castors swivel through 360° for manoeuvrability whilst the middle castor stabilises the UHS and enables it to stay on course.

Quick release floor pad

The SEBO floor pad has been developed to achieve the best possible polishing performance on all suitable surfaces when used with an appropriate floor maintenance product. Also a quick release system means you can remove and re-fit the floor pads quickly and easily.

SEBO DART UHS USAGE GUIDE / TECHNICAL DETAILS

1. Vacuum the floor

2. Mop the floor

3. Apply floor maintenance product

4. Polish the floor

Initial Cleaning**

1. Before using the SEBO UHS for the first time please clean the floor thoroughly.
2. Add some floor maintenance product to the water as per the manufacturer's instructions, if required. Before polishing please ensure that the floor is completely dry.
3. Apply an appropriate floor maintenance product** in accordance with the manufacturers' instructions.
4. Move the SEBO UHS slowly over the floor in a regular motion.

Intermediate Cleaning** Regular polishing will maintain an even finish and ensure the appearance of the floor lasts longer. Always vacuum the floor first before using the polisher to remove dirt and dust.

FLOOR SUITABILITY** The SEBO UHS is recommended for cleaning and maintenance of most hard floors.

Suitable:

- > Sealed wood with water resistant finish
- > Unsealed or oiled wood
- > Marble, granite
- > Linoleum, vinyl

Limited suitability:

- > Porous natural stone, e.g. slate
- > Laminate with water resistant finish

Unsuitable:

- > Cork
- > Porous tile, e.g. terracotta
- > Cushion vinyl

Technical Details > Motor: 200 Watt > No. of Revolutions: 2000 U/min > Work width: 30cm > Weight: 3.9kg

SEBO KOMBI HEAD: Fits to the SEBO Dart and is ideal for hard floors and also carpet.

**Please refer to the manufacturers' care instructions/usage guides for your flooring and floor maintenance products. This is a general guide only as floor qualities vary. We recommend sample testing first.
